

Guider: Temporary Fix

1. Close the secondary and guider GUI.
2. Open a new terminal.
3. At the prompt type `sudo service webclient-compose stop` and hit enter.
 1. It will ask for your password. Use the standard vattobs password.
 2. It takes a while for this to die, I've seen it take 30 or more seconds.
4. When the prompt reappears, type `sudo service webclient-compose start` and hit enter.
5. This should return pretty quickly, within 5 seconds or so.
6. You're done!
