

AzCam Load Controller File Error

When resetting AzCam, you may see **LoadControllerFile error** in the AzCam status window. To fix this follow these steps:

- Quit out of AzCam
- Doubleclick Restart Camera Server on the desktop
- Start AzCam

The issue should be fixed. If not, repeat.

UPDATE The desktop icon is no longer there, shutdown bigccd completely, restarting does not work, and turn bigccd back on using the power button on the front. This fixes the issue.
