

# What's New at the 90"?

1. March 16, 2018: New Weather PC installed (note: password needed to boot up, it's posted on the PC box and monitor)
2. Feb. 18, 2018: TCS Console is now powered by the Control Room UPS mounted in the rack.
3. August 2018 TCS Console UPS upgraded to an APC ON-Line UPS
4. August 2018 Always-ON-Network is completed. It stays ON during a lightning shutdown to provide WiFi, telephone and weather data.
5. August 2018 BOKCCD computers are consolidated. BOKCCD2 is the computer for B&C and 90Prime, BOKCCD4 is the spare.
6. October 19, 2018: Some lights on console do not work, for example Dome Left/Right, Screen Up/Down. These buttons still work correctly, the lights are just out.
7. October 22, 2018: [Kitt Peak Weather Websites](#)
8. October 22, 2018: We have re-aluminized the secondary, laser aligned it and collimated the primary. The f/9 focus may have changed a small amount for instruments at cass focus since we made an improvement in the secondary housing by adding cork between the glass and metal structure.
