

# Accessing Image Data

## From the Guest WIFI

For security reasons, the Guest WIFI is now on a separate network from the VATT TBArray where image data is stored. You can access this separate network by using ssh, scp or similar tool. This is done by connecting to `vattobs@vatt.as.arizona.edu` with the usual password. If you do not know the password contact someone at VATT. From here you can find your image data in the `/mnt/TBArray` directory.

### An example Using scp

On a \*nix like machine you can copy your image data in this way:

```
scp -r vattobs@vatt.as.arizona.edu:/mnt/TBArray/images/<your-data-directory>/* .
```

for instance:

```
scp -r vattobs@vatt.as.arizona.edu:/mnt/TBArray/images/kikwaya/20171019/* .
```
